

Worksheet 5. Aqueous Equilibrium Problems; Simple Equilibria

1. Identify the acid/base and their conjugate base/acid, and which definition you use to determine(Bronsted, Arrhenius or Lewis):

- a. $\text{HCO}^{3-} + \text{H}^+ \leftrightarrow \text{H}_2\text{CO}_3$
- b. $\text{HCO}^{3-} \leftrightarrow \text{CO}_3^{2-} + \text{H}^+$
- c. $\text{CH}_3\text{NH}_2 + \text{H}_2\text{O} \leftrightarrow \text{CH}_3\text{NH}^{3+} + \text{OH}^-$
- d. $\text{C}_6\text{H}_5\text{OH} + \text{H}_2\text{O} \leftrightarrow \text{C}_6\text{H}_5\text{O}^- + \text{H}_3\text{O}^+$
- e. $\text{H}_2\text{O} + \text{H}_2\text{O} \leftrightarrow \text{H}_3\text{O}^+ + \text{OH}^-$

2. Assuming $K_w = 1 \times 10^{-14}$, calculate the molarity of OH^- in solutions at 25°C when the H^+ concentration is:

- a. 0.2M
- b. 5×10^{-10} M
- c. 100 M

3. For each of these **strong** acid/base solutions, calculate the molarity of OH^- , H^+ , pH and pOH

- a. 0.01M NaOH

- b. 5M HNO_3

- c. 0.007M Ba(OH)_2

4. Fill in the blank (all concentrations are at equilibrium):

Acid	[HA]	$[\text{H}^+]$	$[\text{A}^-]$	K_a
Chlorous acid HClO_2	0.6	??	.077	1.0×10^{-2}
Nitrous acid	18.6	.20	4	??
Hydrocyanic acid HCN	??	7×10^{-5}	2×10^{-4}	4.9×10^{-10}
Phosphoric acid H_3PO_4	0.076	0.3	??	7.6×10^{-3}

5. The pH of a 0.115M solution of chloroacetic acid, ClCH_2COOH , is measured to be 1.92. Calculate K_a for this monoprotic acid.

6. Calculate the concentrations of all the species and the pH in 0.10 M hypochlorous acid, HOCl . For HOCl , $K_a = 3.5 \times 10^{-8}$.

7. One liter of saturated barium sulfate solution contains 0.0025 grams of dissolved BaSO_4 .

(a) What is the molar solubility of BaSO_4 ?

(b) Calculate the solubility product constant for BaSO_4 .

8. Calculate the molar solubility, silver and chloride ion concentrations, and solubility in grams per liter for saturated AgCl ($K_{\text{sp}} = 1.8 \times 10^{-10}$).
