1. What factors determine the rate of a reaction? How does each of them affect the rate?

2. To minimize the rate of a reaction, would you minimize or maximize each of the above terms you listed in (1)? Can you think of a spontaneous reaction that has a slow rate?

3. Write the rate expression for the following reaction:
   \[ 2A + 3B \rightarrow 4C + D \]

4. Define activation energy. How does a catalyst change the activation energy? What is its effect on the equilibrium?

5. What is the rate constant \( k \), and what is the order of reaction if \( k = 4 \text{ M}^{-1}\text{sec}^{-1} \)

6. Consider the reaction \( A \rightarrow B \), what is the order of the reaction and what is the rate expression?

<table>
<thead>
<tr>
<th>[A]</th>
<th>[B]</th>
<th>Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Experiment 1</td>
<td>1 M</td>
<td>1M</td>
</tr>
<tr>
<td>Experiment 2</td>
<td>1M</td>
<td>3M</td>
</tr>
<tr>
<td>Experiment 3</td>
<td>2M</td>
<td>1M</td>
</tr>
</tbody>
</table>

7-9. Consider the following reaction diagram for the following three questions:

7. What is the overall \( \Delta H \) for the above reaction?

8. What is the \( \text{E}_a \) for each step in the uncatalyzed reaction? In the catalyzed reaction? Which step is the rate-determining step? \( \text{E}_{a1\text{uncat.}} = 80 \text{ kJ}, \text{E}_{a2\text{uncat.}} = 40 \text{ kJ}, \text{E}_{a1\text{cat.}} = 20 \text{ kJ}, \text{E}_{a2\text{cat.}} = 30 \text{ kJ} \).

9. Is this reaction endo or exothermic?
10. Which of the following statements is true? If any are false, correct them to make them true.
   a. A catalyst is always consumed in the overall reaction.
   b. A catalyst must always be in the same phase as the reactants.
   c. A catalyst can change the course of a reaction and allow different products to be produced.

11. Which of the following reactions appears to involve a catalyst? If so, is it homogenous or heterogenous?
   a. CH₃CO₂CH₃(aq) + H₂O(l) \rightarrow CH₃COOH(aq) + CH₃OH(aq)
   b. H₂(g) + I₂(g) \rightarrow 2HI(g)
   c. 2 H₂(g) + O₂(g) \rightarrow 2H₂O(g)
   d. H₂(g) + CO(g) \rightarrow H₂CO(g)

12. Which of the following regarding catalysts is false?
   a. The concentration of a catalyst can appear in the rate law.
   e. A catalyst increases reaction rate by lowering ΔH_rxn.
   f. A catalyst promotes a reaction by orienting the reacting partners in favorable positions.
   g. The Ea for a reaction never changes.
   h. Catalysts are usually very specific in the substrates they work with and the reactions they promote.
   i. Enzymes, radicals (photons), acids, bases and metals are all famous catalysts.

13. For the reaction of NO and O₂ at 660K,
   \[2NO(g) + O₂(g) \rightarrow 2NO₂(g)\]
<table>
<thead>
<tr>
<th>[NO] mol/L</th>
<th>[O₂] mol/L</th>
<th>Rate disappearance of NO (mol/L*s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.010</td>
<td>0.010</td>
<td>2.5 x 10⁻⁵</td>
</tr>
<tr>

<td>0.010</td>
<td>1.0 x 10⁻⁴</td>
</tr>
<tr>
<td>0.010</td>
<td>0.020</td>
<td>5.0 x 10⁻⁵</td>
</tr>
</tbody>
</table>
   a. Determine the order of reaction for each reactant.
   b. Write the rate equation for the reaction.
   c. What is the rate constant?
   d. What is the rate when [NO] = 0.025 M and [O₂] = 0.05 M?

14. Nitryl fluoride is an explosive compound that is made by the oxidation of nitrogen dioxide with fluorine.
   \[2NO₂(g) + F₂(g) \rightarrow 2NO₂F(g)\]
<table>
<thead>
<tr>
<th>[NO₂] mol/L</th>
<th>[F₂] mol/L</th>
<th>[NO₂F] mol/L</th>
<th>Rate disappearance of NO (mol/L*s)</th>

<td>0.0020</td>
<td>0.0010</td>
<td>1.6 x 10⁻⁴</td>
</tr>
</tbody>
</table>
a. What is the rate law for the reaction?
b. What is the order of the reaction with respect to each reactant and product?
c. Calculate the rate constant k.

15. Which of the following factors will affect the rate of a reaction?
   I. Concentration of reactants
   II. temperature
   III. catalyst
   IV. physical phase
   i. I, II, III, IV
   ii. I, II only
   iii. I, II, II only
   iv. None of above

16. Which of the following statements regarding kinetics is true?
   I. Reaction orders must be integer values
   II. Zeroth order processes are dependent on reactant concentration
   III. The power n in the following rate expression has no direct relation to the coefficient in the balanced chemical equation:
       \[ aA \rightarrow \text{products}; \text{Rate} = k[A]^n \]
   a. I only
   b. II and III
   c. III only
   d. None are true

17. Given the following reaction:
   What is the rate constant k for the first order decomposition of N\(_2\)O\(_5\) (g) at room temperature if the half life at room temperature is 4.03 x 10\(^{-4}\) s?

18. After one day, what percentage of N\(_2\)O\(_5\) (g) molecules will NOT have reacted?

19. For the reaction
   \[ 2 \text{ NO(g)} + 2\text{H}_2 \rightarrow \text{N}_2 \text{ (g)} + 2 \text{ H}_2\text{O(g)} \]
   it is observed that when the concentration of hydrogen gas is cut in half, the rate of the reaction is also cut in half. When the concentration of NO is multiplied by 10, the rate of the reaction increases by a factor of 100.
   Write the rate expression for this reaction.
   a) Rate = k[NO]\(^2\)[H\(_2\)]
   b) Rate = k[NO]\(^2\)[H\(_2\)]
   c) Rate = k[NO][H\(_2\)]

20. The reaction FClO\(_2\) \rightarrow FClO(g) + O(g) is first order with a rate constant of 6.76 x 10\(^{-4}\)/s at 322 C.
   What is the half life of the reaction at 322 C?
   a) 3.03 x 10\(^3\) s.
20. For the reaction in question 20: If the initial partial pressure of FClO₂ (g) in a container at 322 C is 0.040 atm, how long will it take to fall to 0.010 atm?
   a) 2.06 x 10^3 s
   b) 1.06 x 10^6 s
   c) 103 x 10^-3 s
